

## Permanent Solution for Utility Cut Repairs

[www.hotmixasphaltondemand.com](http://www.hotmixasphaltondemand.com)

Twitter @HMAondemand

# Asphalt Patch Master

**Made in the USA with crumb rubber from repurposed waste tires**

**Available in 35lb Premix Virgin, 35lb Premix RAP Premix**

**and 5lb RAP REJUVENATOR pellets**

Keeping up with utility cut repairs & potholes is a never-ending battle. They create dangerous road hazards resulting in accidents, injuries and damage to property.

Dead-time traveling to the asphalt plant, waiting on line for loading and then driving to the repair site can now be avoided thereby maximizing labor hours and material.

***PelletPATCH & PelletRAP provide an industry changing methodology to bring the hot asphalt plant directly to the repair site anytime 24 x 7 x 365 even in cold temperature!***

Our competitive advantages vs. *cold patch* and *hotmix asphalt* are:

- ◆ To demonstrate that this asphalt binder material is workable and usable even in difficult climates with swings between cold and hot temperatures
- ◆ To demonstrate that the material once placed down would have the durability expected from using a rubberized modified asphalt binder
- ◆ To determine the true cost of repairing potholes using temporary measures vs. a permanent solution that is available on demand year round
